

REGULAR EXPRESSIONS QUICK REFERENCE

Basic Patterns	
Metacharacters	
.	Any character (except newline)
^	Start of string / line
\$	End of string / line
*	0 or more of previous
+	1 or more of previous
?	0 or 1 of previous (optional)
\	Escape metacharacter
Literal Matching	
hello	# matches "hello" exactly
a.c	# matches "abc", "a1c", "a-c", etc.
\.txt	# matches literal ".txt"
Character Classes	
Bracket Expressions	
[abc]	Match a, b, or c
[^abc]	Match anything except a, b, c
[a-z]	Lowercase letter
[A-Z]	Uppercase letter
[0-9]	Digit
[a-zA-Z0-9]	Alphanumeric
Shorthand Classes	
\d	Digit [0-9]

\D	Non-digit [^0-9]
\w	Word char [a-zA-Z0-9_]
\W	Non-word char
\s	Whitespace [\t\n\r\f]
\S	Non-whitespace
Quantifiers	
Greedy Quantifiers	
*	0 or more (greedy)
+	1 or more (greedy)
?	0 or 1 (greedy)
{n}	Exactly n times
{n,}	n or more times
{n,m}	Between n and m times
Lazy Quantifiers	
*?	0 or more (lazy / non-greedy)
+	1 or more (lazy)
??	0 or 1 (lazy)
{n,m}?	Between n and m (lazy)
Lazy quantifiers match as few characters as possible	
Greedy vs Lazy	
<.+>	# greedy: "bold"
<.+?>	# lazy: ""
Anchors	

^	Start of string (or line with m flag)
\$	End of string (or line with m flag)
\b	Word boundary
\B	Non-word boundary
\A	Start of string (not affected by m)
\Z	End of string (not affected by m)
Anchor Examples	
<pre>^Hello # starts with "Hello" world\$ # ends with "world" \bword\b # "word" as whole word \Bword\B # "word" inside another word</pre>	
Groups & Alternation	
Capturing Groups	
<pre>(abc) # capture group: match "abc" (a b c) # alternation: a or b or c (cat dog) # match "cat" or "dog" (\d{3})-(\d{4}) # groups: "123-4567"</pre>	
Group Types	
(pattern)	Capturing group
(?:pattern)	Non-capturing group
(?P<name>pat)	Named group (Python)
(?<name>pat)	Named group (JS, .NET)
\1 \2	Backreference to group 1, 2
a b	Alternation: a or b

REGULAR EXPRESSIONS QUICK REFERENCE (continued)

Lookahead & Lookbehind	
(?=pattern)	Positive lookahead
(?!pattern)	Negative lookahead
(?<=pattern)	Positive lookbehind
(?<!pattern)	Negative lookbehind

Lookaround Examples

\d+(?= USD)	# digits followed by " USD"
\d+(?! USD)	# digits NOT followed by " USD"
(?<=\\$)\d+	# digits preceded by "\$"
(?# digits NOT preceded by "\$")	

Lookarounds match a position without consuming characters

Common Patterns	
\d{1,3}(\.\d{1,3}){3}	IPv4 address (basic)
[\w.+-]+@[\w-]+\.[\w.]+	Email (basic)
https?://[\w./\-?&# =]+	URL (basic)
\((?\d{3}\)?[-.\s]?\d{3}[-.\s]?\d{3})\d{3}	US phone number
\d{4}-\d{2}-\d{2}	Date (YYYY-MM-DD)
#?[0-9a-fA-F]{6}	Hex color code

These are simplified patterns; production use may need stricter validation

Flags

g	Global: find all matches, not just first
i	Case-insensitive matching
m	Multiline: ^ / \$ match line boundaries
s	Dotall: . matches newline too
x	Verbose: ignore whitespace, allow comments
u	Unicode: full Unicode support

Flag Usage by Language	
/pattern/gi	# JavaScript
re.compile(r"pat", re.I re.M)	# Python
grep -iE "pattern"	# grep (extended)
